Kuala Lumpur/Penang

SUMMARY

- **Profile**: Hybrid Cloud Engineer specializing in Azure and AWS cloud infrastructure, containerized solutions, full-stack applications, deployment pipelines.
- **Core Strength**: Hands-on experience across Azure and AWS cloud services, container orchestration,, modern web frameworks, iOS development, and secure hosting infrastructure.
- **Objective**: Seeking an entry-level Hybrid Cloud Engineer role starting January 2027 to deliver resilient multicloud solutions, gain hands-on enterprise exposure, and contribute directly to company scalability.

TECHNICAL SKILLS

- Languages: C#, PHP, TypeScript, Python, Swift, Bash.
- Infrastructure: Azure, AWS, Linux, VPS, Cloudflare, DNS, Nginx.
- Containerization: Docker, Podman, Kubernetes.
- Databases: PostgreSQL, NoSQL, Vector Databases, Supabase.
- Frameworks: React, Vite, Node.js, Web3, iOS SDK.
- Tools: Git, Github, LLM integration, Websockets, OBS, Unity.

EXPERIENCE & PROJECTS

UniKL MIIT KAiLA Internship (August 2026 - December 2026)

- Assisted in developing the iOS mobile application under Swift environment.
- Configured lab PC as a local server environment by utilizing Cloudflare Tunnel to support application backend operations and testing.
- Engineered agentic ecosystem in OBS to control frame of sources by utilizing Deepgram agent services.

Microsoft Azure Factory Data Simulation Infrastructure

- Engineered a containerized Python data pipeline to process simulated factory telemetry data from Kaggle, routing structured outputs to Azure Cosmos DB for low-latency storage.
- Utilized Linux Podman to build and push container images to Azure Container Registry (ACR), deploying the workload across a newly provisioned 2-node Azure Kubernetes Service (AKS) cluster.
- Established comprehensive system observability by integrating Azure Monitor and Log Analytics with Azure Managed Grafana to track node health and data ingestion metrics.

Final Year Project: Blockhain Phygital Apparel System

- Managed a collaborative full-stack development workflow, building the application architecture with Node.js, React, and TypeScript.
- Implemented the Thirdweb SDK to enable seamless Uniswap wallet connectivity and securely process on-chain cryptocurrency transactions.
- Leveraged the Supabase TypeScript SDK to synchronize on-chain transaction receipts directly with physical shipping records, deploying the production application via Vercel.

EDUCATION & TRAINING

Diploma in Information Technology | Universiti Kuala Lumpur MIIT | July 2024 - December 2026

- Graduate with CGPA 3.5
- Relevant Coursework: Web Application Architecture, Database Systems, Systems Management, Statistical Analytics.

AWS Cloud Foundational | Project Ignite AWS re/Start Cohort 5| Oct 2026 - Feb 2027

- Part-time online learning program organized by Forward College
- Comprehensive study of AWS core services, compute workloads, and foundational cloud architecture.
- Intensive labwork activities using AWS console and Amazon Linux environments to provision compute workloads and file content management.
- Expanding multicloud infrastructure capabilities to complement Azure expertise.

Skill Badges

- Microsoft Azure AZ-900: Earned badges covering fundamental cloud infrastructure of Azure Compute, Azure Networking and Azure Governance.
- Microsoft Azure AI-200: Former exam candidate. Earned skill badges in Azure Kubernetes Service, Azure Container Apps, Azure Event Grid, Azure Data Services, Azure Managed Redis and OpenTelemetry.
- Google Cloud: Earned skill badges in Google Kubernetes Engine, GPU Computation and Machine Learning Operations Fundamentals.

ADDITIONAL SKILLS

- Soft Skills: Analytical Problem-Solving, Rapid Adaptability, Professionalism.
- Languages: Bahasa Melayu, English, Mandarin.
